When I select a particular outfit! am confused that how the overall ensemble outfit will look? I can order both the things( T-shirt and Lower) together but if I don't like the combination it would take long time in the return process

The user can **only select one** Product at a time and cannot see that how does the **combination** of the products would look as the other product will be in the wish list.

RETENTION	User loyalty	Recurring users	Monthly retention rate, number of items sold by same reseller
TASK SUCCESS	User goal completion	User analytics and user studies.	Number of items sold, number of points earned

## **METRICS WRONGLY IMPACTED:**

• If the cumulative revenue • It must be analyzed per page, looking at user is going down ,per journey, to understand if feature revenue must be considered to see which a particular feature is experiencing maximum feature is doing well and bounce rate, it should be which is not. improved accordingly. **Bounce** Monthly rate revenue LTV :Cac Churn ratio rate •If churn rate is going up ,it nis is to understand how must be analyze what kind of much company is spending to user they are losing, as per maximize growth and revenue, their past trends user must be on acquiring customer. if its offered customized deal to low company needs to evaluate bring them back. to cut down coasts on customer acquisition.

## POSSIBLE REASONS FOR FAILURE

1.

• Product Match in Customize look needs to have a high accuracy as user sentiments are affected. The implementation cost of a high accuracy Algorithm (>99%) is a barrier for an efficient implementation.

2

• In the case BEWAKOOF uses an external API for Product Recommendations, it's added to **cost incurred per customer.** 

3.

 Inefficient implementation of the feature could cause distrust in users about how a profile is verified, App reviews/ratings and Weekly Active users can be tracked.
